

## Remanufactured Forklift Parts

Remanufactured Forklift Parts - Forklifts are rather pricey pieces of equipment because a new electric forklift unit could cost starting from \$18,000 to \$25,000, for a five thousand pound equipment. What's more, a few thousands of dollars would have to be invested in a battery charger and battery. The same internal combustion lift truck of similar lift capacity will cost slightly less and the diesel units which are capable of heavier lifting capacities can cost upwards of \$100,000. Reconditioned forklifts are an alternative to be able to save a great deal of cash because they cost less than half the price of new models.

Some people think they would deal with more repairs issues if they acquire a reconditioned lift truck and are leery of acquiring a used lift truck at a sale price. A properly reconditioned forklift would perform just in addition to a new one and whichever worries of upkeep are unfounded. Even though your lift will get heavy use, so long as you take proper care of the machinery, it would serve all your requirements and probably save you lots of money.

It is essential to determine what the seller means by a reconditioned or refurbished lift truck when considering buying a second-hand forklift. A lot of businesses do a really good job reconditioning a model prior to selling it. This consists of disassembling the forklift, rebuilding the engine, sandblasting the lift and next reassembling everything and finishing with a fresh coat of paint.

To meticulously reconstruct a lift truck engine, a good business will first totally disassemble it. A heat cleaning system is then used to clean all of the parts. When this step has been finished, all of the parts are checked to see if they have any extensive wear, any defects or breakage. Particular components like for instance connecting rods, cylinder heads, crankshafts and cylinder blocks are resurfaced, resized and reground if needed. Other components such as gears, nuts, bolts etc. are repaired or replaced as considered necessary.

The engine is rebuilt manually when the overhaul has been accomplished. After putting it back together, a series of tests are applied to the working machine. This is done in order to check all of the components to guarantee there are no issues or leaks. If any problems occur, the needed modifications are made.

There is no reason to be concerned about buying reconditioned forklifts from quality sellers. The process the machines go through to be rebuilt ensures the utmost dependability. Maintenance expenses could really work out to be less since you will avoid the initial phase of higher repairs projections which a new forklift has as it is broken in. By following routine maintenance schedules and taking care of the machinery appropriately, a reconditioned forklift would serve you well.
